(Red)

TO: Larry S. Miller, Chief
Water Quality Monitoring Branch (3SA60)

From discussions with Tom Munson and Ort Villa on Thursday (2/24/77) in addition to those with Bernie Sarnoski and Charlies Kleeman, Water Supply Branch, on Wednesday afternoon the following comments concerning Llangollen are presented for your information.

1. Samples were collected by the Annapolis Field Office with EPA and Cincinnati being responsible for the analytical work. All but one of the seven wells requested (well #49) was sampled.
2. During the sampling on Tuesday (2/22/77) environmental conditions made it very difficult for sample collection and maneuverability at the site. Ort would like to wait approximately one month for better weather conditions before he proceeds any further with additional sampling efforts. Water Supply is agreeable to this.
3. Relative to (2) it is hoped that Water Supply, Enforcement and S&A can meet during the week of 2/28/77 to coordinate Phase II of this project. This meeting will encompass recommendations of additional well sampling as well as the sampling of the one well deleted in the 2/22/77 survey. Memos from Enforcement & Water Supply will spell out their needs relative to this and submitted to S&A; this will go to the Annapolis office for their information and scheduling of the 2nd visit.
4. One final note: Thru Al Montague's efforts, Cincinnati's samples are being handled by representatives at the University of Illinois and Stanford University. Annapolis had gone thru elaborate preparation of the samples and containers for those samples in order to meet their requirements.
